So why not a task manager? WinDefend is a simple and reliable free task manager. It is really powerful and can manage the following features: \* Show and hide programs, which you can set the time-limit, \* Turn programs on or off when you close them. \* Protect a program with a password, to open it automatically. \* Open files and folders directly from the task bar. \* Display and run processes by using keywords. \* Scan and repair infected files with WinDefend. \* Create and save tasks list on the web. \* Add, edit, remove tasks. Automatically identifies and removes Windows "Purity Balls" from your PC Like the virus you have never seen before, this curious little bundle of mysterious code starts out innocent. Windows "Purity Balls" are small self-replicating.exe programs that hide in the background of your system or on your removable storage media and that have no discernible purpose other than to attack other programs and keep them from running. They often cause their host to slow down and become unstable, and worse yet, they can cause irreversible damage to a computer. Forget about the vast array of free programs on the Internet that claim to remove them or

get rid of them, because the only sure way to get rid of these nasty software entities is to use the most effective and efficient tool to fight them. Keep track of visits, and block bad sites. This includes a back-link check to see if a site is currently reported. This tool can also monitor web-crawlers and identify malicious scripts. It also stores the URL in a database for easy reference, and it can be configured to block a specific URL. Your browser may add/remove/modify data at runtime to achieve the goals of the website you are viewing. This feature is known as data-storage

KEYMACRO is a powerful, full featured e-mail security tool. It is designed to help you to ensure the security of your mail servers and to protect you from spyware, viruses and phishing attacks. It includes an anti-spam function that helps prevent unwanted mail from being delivered to your mail server. You may also use it to encrypt and secure the contents of your mail and attachments. With a "sandbox" mode, you can check your mail in an isolated environment to see if it was sent by a non-trusted source or contains suspicious content. Another unique feature of KEYMACRO is a new tool called M-SPY that scans for active viruses on your computer and on your e-mail system. This includes viruses, spyware, Trojans, worms, rootkits, adware, and more. M-SPY also scans attached files for viruses and spyware. You can also use M-SPY to scan, repair and remove "crapware" software, adware, spyware and other types of unwanted software. Panda Mail Server features: Panda Mail Server is a powerful, free, open source e-mail server that supports POP3, IMAP and IMAP4, SMTP, LMTP, MIME and SSL, message archiving, M-SPY, virus scanner, antispam, and more. Panda Mail Server allows you to create a "mail system" that allows you to control all of your mail settings, send and receive messages, and retrieve messages from any remote server. There are two modes of operation: Local Mode, where messages are stored locally, or a remote Mode, where messages are stored remotely on another machine. Panda Mail Server also has a tool for tracking failed e-mail messages. You can track who sent or received a message and why it failed. You can also archive messages, sort messages by senders or receivers, search messages, and even monitor users that log into your system. Panda Mail Server is easy to install and configure. Download and run the self-extracting executable file. When the installation process is complete, double click the start-up file to start the program. Panda Mail Server requires a text based install process. This install can be completed from either the command line, DOS prompt, or the Windows GUI. When the installation is complete, you will be able to access the "New Mail" window. The "New 2edc1e01e8
