A team of scientists from the National Institute of Standards and Technology (NIST) are standing over this image of the Space Shuttle Columbia, taken in 1995. They're capturing the 16 million RGB pixels of this NASA black-and-white image so that those pixels can be inspected after the fact using their new, state-of-the art image inspection facility that will be unveiled at NIST in March, adding layer of scrutiny to photographs' pixel content to ensure image accuracy. And if that doesn't feel like a smoking gun—well, just remember that NIST is the government agency responsible for our money and physical identities. The torch has been passed. The long road to the abandonment of the deprecated Composite De-Noise filter is over. I'm generally not a fan of the Composite De-Noise filter in the first place, but it's absolutely brilliant to see it replaced not only by Topaz's new DeNoise module, but also by Photoshop's Revolutionary new Non-Local Means technique. Unfortunately, the Ranker preview mode is not available on iPhone at this time, but I will be preparing a video review so that you can get a glimpse just how much post-production magic has happened here. I've included in this review a couple of images I shot with the new iPhone 7 Plus paired with a Prismacolor Graphicmate Pro pen. In the first shot (pictured at left), I was able to use the new Smart Select tool to quickly and easily crop the finished image to blemish the "money" (in case you couldn't tell) and then quickly discard the rest of the image. In the second shot, I was able to take control of the whole image using a color and brush reference and paint directly on the image. I was also able to edit the size of the brush by moving the borders—it's cooler than it sounds.

The Palette, a setting in the Preferences window, gives users an easy and intuitive way of managing color. There, users can simply drag and drop colors to tag them and tag objects and then organize their palettes. With the new crop tool, users can now grab and remove regions directly from an image. When the New Features Task pane is enabled whether on a Home screen, a Layer, a Stamp, or a Reference file, it is a list of all the new features of the currently loaded file. The task pane also includes a Notes section with why certain features are included. New features are also available through Plug-ins. Over the years, the tools installed on the computer have varied greatly—and Photoshop itself is no different. With the new feature pane, you'll be able to see which Plug-ins or Applications offer new features without having to install them. Rather, you simply load Photoshop and start using them. One of the best features that Photoshop has had in recent years is the ability to duplicate layers. This is useful for creating illustrations on a separate layer, which you then move to an entirely different file. You can now duplicate layers without having to redo any editing. You can also quickly duplicate a layer and perform quick edits to that layer without having to deal with the original layer. To duplicate a layer in Photoshop, simply use Ctrl+J (Command+J on a Mac) and then either enter your layer name or press Enter. Your layer will instantly appear as a duplicate layer.
